"Genes expressed in the brain define three distinct neuronal

nicotinic acetylcholine receptors.";

EMBO J. 7:595-601(1988).

-!- FUNCTION. After binding acetylcholine, the AChR responds by an

extensive change in conformation that affects all subunits and
leads to opening of an ion-conducting channel across the plasma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                01-MAR-1989 (Rel. 10, Created)

Neuronal acetylcholine receptor protein, alpha-2 chain precursor.
Gallus gallus (Chicken).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SUBUNIT: Neuronal AChR seems to be composed of two different type of subunits: alpha and non-alpha (also called beta). A functional receptor seems to consist of two alpha-chains and three non-alpha chains.
SUBCELLULAR LOCATION: Integral membrane protein.
SIMILARITY: Belongs to the ligand-gated ionic channel family.

Natl. Acad. Sci. U.S.A. 82:5208-5212(1985).
FUNCTION: After binding acetylcholine, the AChR responds by an extensive change in conformation that affects all subunits and leads to opening of an ion-conducting channel across the plasma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SUBUNIT: Pentamer of two alpha chains, and one each of the beta,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Klarsfeld A., Daubas P., Bourachot B., Changeux J.-P.;

RA SEQUENCE FROM N.A.

RA SEQUENCE FROM N.A.

RA SCHULTE T., Oellers N., Adamczewski M.;

Rutarive alpha subunits of insect nicotinic acetylcholine receptors

RT "Putarive alpha subunits of insect nicotinic acetylcholine receptor alpha subunits.";

RT more similar to vertebrate alpha 7 subunits and C. elegans Ce21 than

RT to other insect nicotinic acetylcholine receptor alpha subunits.";

RI SUBMILTARITY BELONGS TO THE EMBL/GenBank/DDBJ databases.

-!- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN (BY SIMILARITY).

CC -!- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN (BY SIMILARITY).

CC -!- SIMILARITY: BELONGS TO THE LIGAND-GATED IONIC CHANNEL FAMILY.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Schulte T., Oellers N., Adamczewski M.;

"Putative alpha subunits of insect nicotinic acetylcholine receptors

"Putative alpha subunits of insect nicotinic acetylcholine receptors

more similar to vertebrate alpha 7 subunits and C. elegans Ce21 than

to other insect nicotinic acetylcholine receptor alpha subunits.";

L. Submitted (APR-1999) to the EMBL/Genbank/DDBJ databases.

-!- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN (BY SIMILARITY).

-!- SIMILARITY: BELONGS TO THE LIGAND-GATED IONIC CHANNEL FAMILY.

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
